

Experiment 26:

Construct a C program to implement the file management operations.

Code:-

```
#include <stdio.h>

int main()
{
    FILE *file;

    file = fopen("example.txt", "w");
    if (file == NULL)
    {
        printf("Error opening the file for writing.\n");
        return 1;
    }

    fprintf(file, "Hello, World!\n");
    fprintf(file, "This is a C file management example.\n");
    fclose(file);

    file = fopen("example.txt", "r");
    if (file == NULL)
    {
        printf("Error opening the file for reading.\n");
        return 1;
    }

    char buffer[100];
    while (fgets(buffer, sizeof(buffer), file) != NULL)
    {
        printf("%s", buffer);
    }
}
```

```
}  
  
fclose(file);  
  
return 0;  
  
}
```

Output:

```
Hello, World!  
This is a C file management example.  
  
...Program finished with exit code 0  
Press ENTER to exit console.
```
