

Experiment:11

Illustrate the concept of multithreading using a C program

Code:-

```
#include <stdio.h>

#include <pthread.h>

void *threadFunction(void *arg)

{

    char *message = (char *)arg;

    printf("%s\n", message); return NULL;

}

int main()

{

    pthread_t thread1, thread2;

    char *message1 = "Hello from Thread 1!";

    char *message2 = "Hello from Thread 2!";

    pthread_create(&thread1, NULL, threadFunction, (void *)message1);

    pthread_create(&thread2, NULL, threadFunction, (void *)message2);

    pthread_join(thread1, NULL);

    pthread_join(thread2, NULL);

    return 0;

}
```

Output:

```
Hello from Thread 2!
Hello from Thread 1!

...Program finished with exit code 0
Press ENTER to exit console.
```
